

AIMS5760 Final Project Presentation Requirement

As we reach the final stage of the **AIMS5740** course, it is time to share the specific requirements for your project presentations. This session is your opportunity to demonstrate how you designed an end-to-end training and evaluation pipeline and navigated realistic compute constraints.

1. Presentation Schedule & Logistics

With **31 groups** to accommodate, we must maintain a strict pace:

- **Total Time: 5 minutes** per group.
 - **Presentation:** 4 minutes.
 - **Q&A:** 1 minute.
- **Order:** Presentations will proceed strictly by **group index**.
- **Preparedness:** Please have your slides ready to go as the preceding group begins their Q&A to ensure a seamless transition.

2. Recommended Presentation Content

- **Problem Setup.**
- **Methodology & Pipeline.**
- **Key Results.**
- **Analysis & Insights.**

3. Presentation Evaluation Criteria

Your presentation grade will be determined by the following specific criteria:

- **Completeness (Rigorous Execution):** Did you cover all required or reasonable pipeline stages and use at least the minimum corresponding benchmarks?
- **Analysis & Insights:** We value your ability to reason about *why* a method worked or failed.
- **Technical Soundness:** Is your training design logical, and is your methodology for model conversion or fine-tuning well-implemented?
- **Clarity & Reproducibility:** Can you clearly communicate your findings and demonstrate that your results are backed by a reproducible code base?
- **Time Management:** Ability to deliver a concise, impactful summary within the **4-minute** window.
